

Abstract

- A sheathed-element glow plug (1) for an internal combustion engine is described. It includes a plug housing (2), a connection part for the electrical current that is situated on 5 the plug housing (2) as well as a sheathed-element heater (4), which is usually in the form of a tube including an embedded heating element. The connecting part and the heating element are electrically coupled by a terminal pin (5) and a contact element (6).
- 10 The terminal pin (5) and the contact element (6) are at least partially surrounded within the housing (2) by an electrically insulating plastic sleeve (7).
